A covalent bond is the chemical bond formed when two atoms share electrons. A molecule is a neutral group of atoms joined by covalent bonds. Know what double and triple bonds are. A double bond is formed when two atoms share two pairs of electrons and a triple bond is formed when atoms share three pairs of electrons.

Covalent Bonds A stable configuration is a completely filled s-type subshell and a p-type subshell. Only five elements have atoms with their valence p-type subshells filled; these are the inert gases in the far right column of the periodic table. Their lack of chemical reactivity is explained by their stable electron configurations.
