A fraction can be represented as a percent by dividing the numerator by the denominator and then multiplying by 100. For example, $3 / 4 = 75\%$ and $1 / 2 = 50\%$. Equivalent Fractions.

Fractions whose numerators and denominators do not have the exact

Online Library Fractions Study Guide

same numerical value are not necessarily unequal. As noted above, $1 / 2 = 2 / 4$. The reason equivalent fractions exist is that the numerator of one fraction and the denominator of that same fraction share a common factor that, when canceled, cause ...

OPERATIONS WITH FRACTIONS STUDY GUIDE

Fractions represent parts of a whole — that is, quantities that fall between the whole numbers. Probably the most commonly used fraction is $\frac{1}{2}$, which is one-half. When you cut a cake into

Online Library Fractions Study Guide

two pieces and take one for yourself,
you get $\frac{1}{2}$ of the cake —hope you're
hungry!

FRACTION REVIEW - Student Affairs | VIU

Multiplying algebraic fractions To multiply algebraic fractions, first factor the numerators and denominators that are polynomials; then, reduce where possible. Multiply the remaining numerators together and

Online Library Fractions Study Guide

denominators together. (If you've reduced properly, your answer will be in reduced form.)

Operations with Algebraic Fractions

The Basics of Fractions A fraction states how many parts are in a whole. The top number is called a numerator

Online Library Fractions Study Guide

and the bottom number is called a denominator. Simply put, the numerator is how many parts out of the denominator so that if you have a fraction that says $1/2$, what it is really saying is “one out of two”.
