content generally higher than 90% and dryness values of less than 0.95.

The dryness of natural gas is higher in the northern slope of Baiyun Sag–Panyu low uplift (0.92–0.98) than in the east of Baiyun Sag (0.90–0.94), which may be associated with the maturity of natural gas and migration.

Shale Reservoir Giant Resources For 21th Century

A petroleum reservoir or
oil and gas reservoir is a
subsurface pool of
hydrocarbons contained
in porous or fractured
rock formations.

Read Free Giant Hydrocarbon

Petroleum reservoirs are broadly classified as conventional and unconventional

reservoirs. In conventional reservoirs, the naturally occurring hydrocarbons, such as crude oil or natural gas, are trapped by overlying rock formations with lower permeability, while in unconventional reservoirs, the rocks
